Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	No
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

```

AI-Powered-Debt-Relief-Financial-Recovery-Platform/
├── frontend/
│   ├── src/
│   ├── public/
│   ├── package.json
│   ├── vite.config.js
│   └── ...
├── backend/
│   ├── app/
│   │   ├── api/
│   │   ├── models/
│   │   ├── database/
│   │   ├── services/
│   │   └── main.py
│   ├── requirements.txt
│   └── ...
├── README.md
├── .env.example
├── Performance_Test_Report
└── Documentation
  
```

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Frontend: https://finrelief-frontend.onrender.com Backend API: https://finrelief-backend.onrender.com
Login Credentials (Demo)	Username: lakshayjain password : Lucky@900
Platform / Hosting Provider	Render
Repository Link	https://github.com/Lakshayjain2006/AI-Powered-Debt-Relief-Financial-Recovery-Platform
Demo Video Link	https://drive.google.com/drive/folders/1vSkAk48TTAs0v3DEHNGTku0gl_BsT6Pf?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.11 or later
- Node.js (LTS Version)
- npm
- Git
- Internet connection
- Google Gemini API Key (configured in the .env file)

Step 1: Clone the project repository.

```
git clone https://github.com/Lakshayjain2006/AI-Powered-Debt-Relief-Financial-Recovery-Platform.git
```

Step 2: Navigate to the backend folder, create a virtual environment, activate it, and install the required Python packages.

```
cd backend
python -m venv venv
venv\Scripts\activate
pip install -r requirements.txt
```

Step 3: Configure the environment variables by creating a .env file (or copying .env.example) and adding the required values such as the Google Gemini API key and other application settings.

Step 4: Start the FastAPI backend server.

```
uvicorn app.main:app --reload
```

The backend will be available at:
http://localhost:8000

Step 5: Open a new terminal, navigate to the frontend folder, install the required Node.js packages, and start the React application.

```
cd frontend
npm install
npm run dev
```

The frontend will be available at:
http://localhost:5173

Step 6: Open the frontend URL in your browser, log in using the demo credentials, and verify that features such as user authentication, debt management, AI chat, settlement analysis, and hardship

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	SQLite database is intended for development and small-scale deployments; write-heavy workloads may cause database locking.	Suitable for academic/demo use. For production, migrate to PostgreSQL or MySQL.
2	AI-powered features depend on external AI services and may have higher response times or fail if the service is unavailable.	Verify API keys and internet connectivity before testing.
3	Render free-tier deployments may take time to wake up after inactivity, resulting in a slow first request.	Wait for the service to start; subsequent requests are faster.
